ClassView

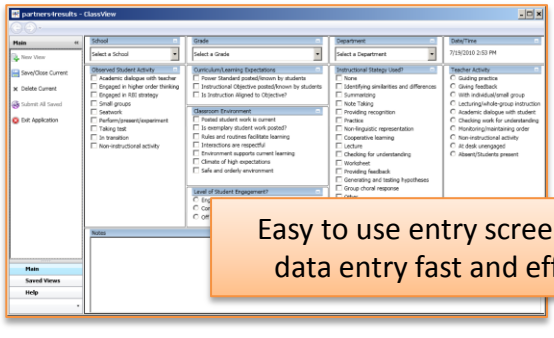
Based on the classroom walk through model, this training and software enables administrators to gather data on the curriculum and instruction practices going on in the local classroom during brief 2 to 4 minute classroom visits. This can be totally electronic based, using almost any PDA, iPad, or Blackberry.

Advantages of ClassView:

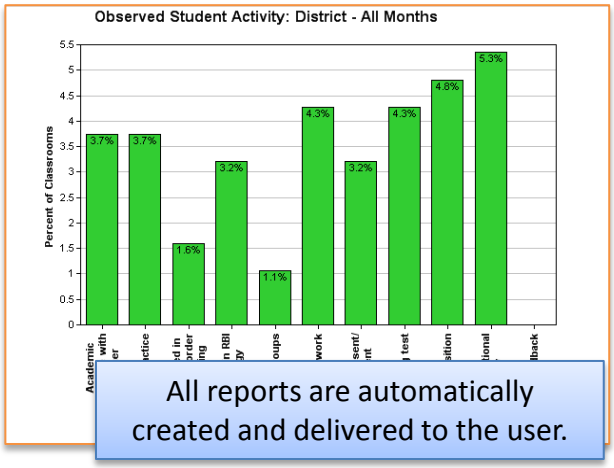
- Identifies those classroom behaviors that research shows make a difference in student engagement and performance
- Encourages Professional Learning Community conversations to identify, define, and learn those research-based strategies
- Allows local district to create its own screens to identify current local curriculum and/or instruction initiatives
- Short duration of visits allows many visits which create a clear picture of curriculum and instruction

Additional Benefits:

- All data is automatically and electronically uploaded to the p4r data warehouse for easy 24-7 access
- Reports are all designed to share with the entire staff as a means for planning initiatives and measuring progress



Easy to use entry screen makes data entry fast and efficient!



All reports are automatically created and delivered to the user.

Our Mission:

We partner with districts to improve student performance through curriculum and assessment alignment, national research, personal relationships, world-class technology and support.
